

AI Data Assistant Chatbot

STARTUP GUIDE

Built by Mrudula Marella

Server	Runs On	URL
Backend (FastAPI)	Terminal 1 — Python	localhost:8000
Frontend (React)	Terminal 2 — Node.js	localhost:3000

■■ IMPORTANT: You must start BOTH servers every time you work on Mimi. Keep both terminal windows open while working — closing either one stops that server.

1 Start the Backend Server (Terminal 1)

Open VS Code → Terminal → New Terminal, then run these commands one by one:

Step 1 Navigate `cd C:\Users\marel\OneDrive\Desktop\datamind\backend`

Step 2 Activate venv `venv\Scripts\activate`

Step 3 Set API key `$env:ANTHROPIC_API_KEY="sk-ant-api03-your-key-here"`

Step 4 Start server `uvicorn main:app --reload`

■ SUCCESS — You will see this in the terminal: INFO: Uvicorn running on http://127.0.0.1:8000 INFO: Application startup complete.

Optional: Test the backend by opening this in your browser:

`http://localhost:8000/docs`

You should see all 8 API endpoints listed on that page.

2 Start the Frontend Server (Terminal 2)

Open a NEW terminal (Terminal → New Terminal), then run:

Step 1 Navigate

```
cd C:\Users\marel\OneDrive\Desktop\datamind\frontend\datamind-ui
```

Step 2 Start React

```
npm start
```

■ SUCCESS — Browser opens automatically at <http://localhost:3000> You will see the Mimi chat interface with the blue header.

3 Using Mimi Chatbot

Feature	How to Use
■ Text Chat	Type in the input box at the bottom → press Enter or click Send
■ Voice Input	Click the microphone button → speak your question → it sends automatically
■ Voice Output	Click ■ button in header to turn voice ON → replies are read aloud
■ Upload CSV	Click paperclip icon → select .csv file → ask questions about the data
■ Upload Text	Click paperclip icon → select .txt file → get an AI summary
■ Summarize Reply	Click ■ Summarize button under any AI reply → get 2-3 sentence summary
■ Stop Voice	Click the ■ Stop button under any message to stop speaking
■■ Clear Chat	Click trash icon in header → clears all messages and history

4 Troubleshooting

Problem	Fix
localhost:3000 not loading (ERR_CONNECTION_REFUSED)	Frontend is not running. Go to Terminal 2 and run: <code>npm start</code>
localhost:8000 not loading	Backend is not running. Go to Terminal 1 and run: <code>uvicorn main:app --reload</code>
Chat says 'Sorry, something went wrong'	API key missing or wrong. Stop server (Ctrl+C) → set key again → restart uvicorn

(venv) not showing in terminal	Virtual environment not activated. Run: venv\Scripts\activate from inside the backend folder
Voice input not working	Use Google Chrome — voice is not supported in all browsers
First message takes 30-60 seconds (live site)	Render free tier is waking up. Wait and try again — it's normal
Changes not showing in browser	Press Ctrl + Shift + R to hard reload the browser page

5 Quick Reference — All Commands

Backend (run in order, every session):

```
cd C:\Users\marel\OneDrive\Desktop\datamind\backend
venv\Scripts\activate
$env:ANTHROPIC_API_KEY="sk-ant-api03-your-key-here"
uvicorn main:app --reload
```

Frontend (run in a second terminal):

```
cd C:\Users\marel\OneDrive\Desktop\datamind\frontend\datamind-ui
npm start
```

Push code changes to GitHub:

```
git add .
git commit -m "your message here"
git push
```
